

Roman Kiselenko

Software Engineer roman.kiselenko.dev@gmail.com

SUMMARY

I am a full-cycle engineer and tech lead with extensive experience in designing core business features and building high-availability infrastructure. I bridge the gap between product development (microservices, APIs) and complex infrastructure challenges (scaling, fault tolerance, security).

WORK

Tech Lead / Golang Engineer / Astra Linux

2025-10 - Present

Led a team of 10+ engineers; standardized onboarding processes, resolved critical architectural disputes, and reduced technical debt by 50% or through specific initiatives. Tech: K8s, GitLab CI, ArgoCD, Terraform, Golang, Prometheus, Vault

Platform Engineer / DevOps / Golang Engineer / Exness

2024-07 - 2025-10

Architected HA platforms for large-scale data & service processing, ensuring 99.99% uptime and zero-downtime upgrades. Implemented policy-driven validation (network, secrets, code quality) and shift-left scanning across GitLab CI pipelines. Built observability runbooks & automation for incident triage, reducing MTTR by ~30% and enforcing SLO/SLI standards. Tech: K8s, Terraform, Ansible, GitLab CI, Cilium, Istio, Vault, AWS/GCP

Platform Engineer / DevOps / Golang Engineer / tutu.ru

2023-06 - 2024-07

Developed high-performance internal automation tools in Golang for workflow orchestration and data processing. Engineered CI/CD pipelines with automated validation, feature flagging, and strict compliance gates (Vault, policy-as-code). Managed K8s/OpenShift environments, standardizing configuration management and reducing manual operational overhead. Tech: Golang, Tekton, Bitbucket Pipelines, K8s, OpenShift, Vault

Golang Engineer / DevOps / DELL EMC

2023-06 - 2024-07

Designed modular data connectors & drivers enabling seamless integration between Kubernetes and enterprise storage systems. Led offshore engineering teams using Agile; optimized task delegation, automation workflows, and cross-timezone delivery. Tech: K8s, OpenShift, Terraform, Ansible, GitHub Actions

Golang Engineer / DevOps / SKETCHAR

2019-06 - 2021-07

Architected high-throughput, low-latency APIs and data processing services on AWS (Lambda/EC2/Fargate). Implemented policy enforcement & security validation frameworks, ensuring zero-trust compliance and audit readiness. Designed auto-scaling, load balancing, and reliability patterns to handle unpredictable traffic surges with minimal downtime. Tech: AWS, CloudFormation, GitHub Actions, CloudWatch, ALB, VPC
